

Winlink Express

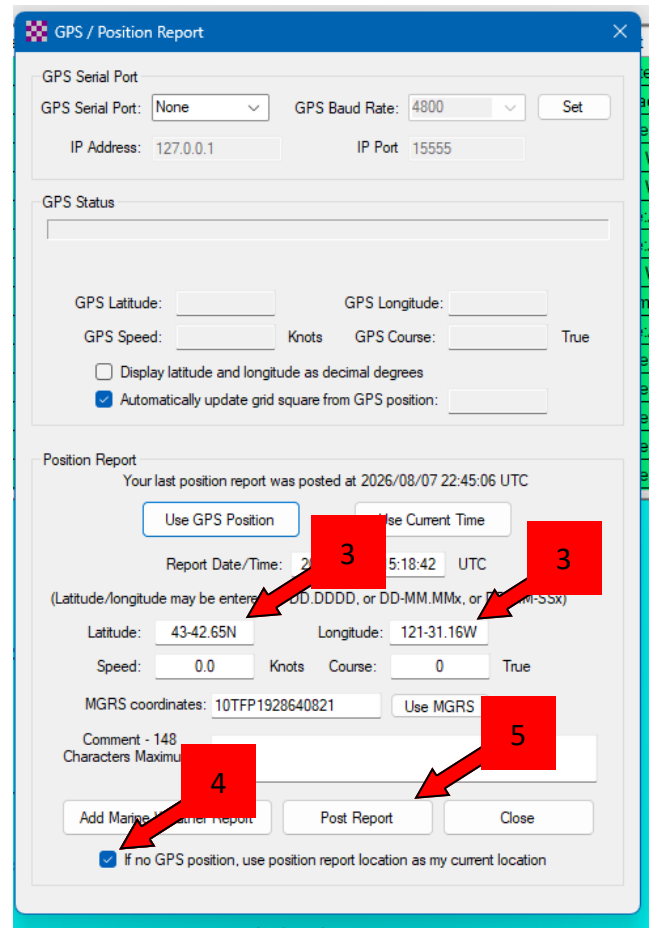

How to Make Your Location Show as “Specified”

Winlink will only show “**Specified**” if your client has a valid latitude/longitude set *and* Winlink is actively using it when the message is posted. If anything is missing or invalid, Winlink falls back to “**Grid Square**”

1. Open **Settings**
2. Select **GPS / Position Reports...**

3. Enter your Latitude and Longitude
Use decimal degrees
Latitude MUST be negative
4. Check the box at the bottom for **If no GPS position, use position report location as my current location**
5. Click **Post Report**. The report will be placed in your Outbox.

6. Open a session and send the report as you would any other Winlink message
